Radha Ashtamī

Exactly fifteen days after Krishna Janmashtami, the festival of Radha Ashtami arrives. Celebrated on the eighth day (Ashtami) of the waxing moon (Shukla Paksha) in the month of Bhadrapada, this day marks the appearance of Shri Radharani. While Janmashtami is celebrated with midnight fasts and widespread festivities across India, Radha Ashtami carries an intimate, sacred warmth—especially across the Braj region. In Hindu tradition, it is believed that worship of Shri Krishna remains incomplete without honoring Radharani.

The sacred traditions of Vraja describe Radharani's appearance in the land of Vraja, in the household of Vrishabhanu Maharaj and Kirtida Devi. Barsana, in present-day Mathura district of Uttar Pradesh, is revered as the sacred birthplace of Shri Radha and remains one of the most important centers of Radha Ashtami celebrations.

Accounts of her divine appearance are found in different Puranic and devotional traditions. One account describes Radhika appearing on the Ashtami tithi of the bright half of Bhadrapada, at the sacrificial ground of Vrishabhanu. Having appeared in a divine form, she was seen by Vrishabhanu Maharaj, who, filled with joy, brought her home and presented her to his queen.

TITHI

In 2026, the Ashtami Tithi begins at 1:00 PM on September 18 and ends at 3:26 PM on September 19.

Another devotional account, found in the *Garga Samhita*, describes Shri Radha's descent into the earthly realm in a glorious transcendental form.

These accounts point toward the same central truth cherished by devotees: Radha is not regarded as an ordinary earthly being, but as a divine manifestation whose appearance is celebrated as an act of grace.

In the philosophy of Acintya-Bhedabheda (simultaneous oneness and difference), Radha and Krishna are one divine reality existing in two forms to experience the bliss of love. While Krishna enchants the entire world, Radha's pure devotion enchants Krishna himself.

Radha Ashtami is observed through fasting, worship, prayer, and remembrance of Shri Radharani. The fast is traditionally observed through the day, much like the observances associated with Janmashtami or Ekadashi, and is broken the following morning according to one's tradition.

Radha: Dearer Than Life to Krishna

The deepest message of Radha Ashtami is perhaps found in the relationship between love and surrender. Radharani's greatness is repeatedly expressed through her complete absorption in Krishna. In the devotional understanding of Vraja, her love is so complete that her own identity becomes inseparable from the happiness of the Divine Beloved. Her devotion asks for nothing in return. She seeks neither wealth, status, nor personal comfort; her joy lies entirely in the happiness of the Beloved. Radha represents the highest expression of love for the Divine: love that seeks nothing for itself and exists entirely for the pleasure of the beloved.

The greatness of Radharani is expressed especially powerfully in the *Brihad-Naradiya Purana*, which speaks of her as the divine Shakti and as one who is dearer to Shri Krishna than life itself. She is described as the presiding deity of the five *pranas*—the vital forces—and as the very life of all.

How Barsana Celebrates:

Nowhere is this festival celebrated with more enthusiasm than in Barsana, located in Uttar Pradesh's Mathura district. Revered as Radharani's childhood home, the town becomes a sea of devotees on this day.

The center of celebration is the famous Shri Radha Rani Mandir (locally called the Ladliji Temple), perched atop the Bhanugarh hill.

Attachment vs Detachment

by **Swami Sarvadevananda**

Raam Mandir Controversy

We were taught to donate to the temple. Who taught us to steal from it?

As Uttar Pradesh heads towards the 2027 Assembly elections, Yogi Adityanath will campaign on a record of economic transformation as much as governance and politics. Since taking office in 2017, his government has sought to turn Uttar Pradesh into a major investment and industrial destination, attracting large investment proposals, expanding infrastructure and improving connectivity through expressways, airports and industrial corridors. The state's economy has grown significantly during his tenure, with the government aiming to make Uttar Pradesh a \$1 trillion economy. Alongside attracting private investment, the government has expanded public spending on infrastructure, urban development and major projects across the state.

While the Uttar Pradesh Assembly election of 2027 is still months away, the political battle has already begun. For Yogi Adityanath and the BJP, the election will be about more than five years of governance. It will also be a referendum on the political and cultural promise that has defined the BJP's relationship with Uttar Pradesh: Ram Mandir and Ayodhya.

When a major controversy emerges around an institution of such national and religious significance, public scrutiny inevitably reaches its most prominent political face. For Yogi Adityanath, as one of the central figures associated with the Ram Mandir project, this means mounting political pressure and opposition attacks, intensified media scrutiny and growing demands for clear answers.

The temple has been presented as the fulfilment of a decades-old Hindu aspiration. Its construction transformed Ayodhya into one of India's most important religious destinations and gave the BJP a powerful symbol of the completion of a historic promise.

The controversy over alleged irregularities in the handling of temple donations has already resulted in an FIR, arrests and an investigation by a Special Investigation Team. The matter has also reached the Supreme Court, which has sought greater scrutiny of the investigation and cautioned political parties against turning the issue into a political battle.

The latest political development is equally important. Yogi Adityanath has said that the SIT's preliminary findings found no involvement of any sadhu or saint in the alleged donation theft.

The BJP's campaign around Ayodhya was built on the idea that Ram Mandir represented not merely a building, but the restoration of faith, dignity and civilisational confidence. That creates a higher standard. When devotees contribute money at the temple, they are not making an ordinary commercial transaction. They are making an offering.

The question is no longer whether Ram Mandir was built.

That question has been settled.

The question now is whether the institution built around one of Hindu society's most revered places can demonstrate the same highest standards - transparency, accountability & integrity expected of any institution entrusted with devotees' money.

Therefore, allegations concerning that offering carry an emotional weight far greater than the amount of money involved.

LoP Rahul Gandhi mocks Raam Mandir donation theft at the Indian Parliament

Eight people have been arrested in connection with the case, and money has reportedly been recovered. At the same time, the investigation has not established that the Ram Janmabhoomi Trust as a whole was involved in theft. That is precisely why the investigation needs to be allowed to run its course.

For Yogi Adityanath, this is not simply an administrative problem. It is a political test.

If Ram Mandir is one of the BJP's greatest achievements in Uttar Pradesh, then the party has an interest in ensuring that the temple's financial and administrative affairs are beyond suspicion. A transparent investigation, prosecution of anyone found guilty, and stronger systems for handling donations would strengthen rather than weaken the credibility of the temple.

The alternative is dangerous.

If unanswered questions continue into the 2027 election, the Opposition will have an easy political weapon: How can a government that made Ram Mandir such a central symbol of its politics explain allegations of irregularities surrounding the temple itself? The BJP cannot answer that question merely by saying that the temple has been built. It has to answer what happened to the devotees' offerings.

And it has to answer it convincingly — before Uttar Pradesh votes in 2027.

Junior

Sanatani

How to Reason ?

Imagine you are walking through the mountains with your grandfather.

You look up at a hill. You see smoke.

You say: "There is a fire!"

Grandfather smiles. "How do you know?"

Junior Sanatani thinks carefully consider how knowledge is gained.

PRATYAKSA

"I observed it."

You see the smoke.

ANUMANA

"I reasoned it out."

You see smoke.

You remember that smoke is commonly produced by fire.

You infer: "There may be a fire."

That is anumāna.

SABDA

"I learned it from a reliable source."

Suppose your grandfather has gone around the hill and tells you:

"There is a small cooking fire behind that house."

You did not see the fire yourself.

You learned it from someone you consider trustworthy.

PRATYAKSA→ANUMANA→SABDA

Junior Crossword

Across

- 4. The prince of Ayodhya
- 5. The goddess who rides a lion
- 8. The sun god
- 9. The god of with serpent around his neck
- 10. The goddess of wealth
- 11. The god of fire
- 13. The devoted monkey god
- 14. The mother goddess

Down

- 1. The preserver of the universe
- 2. The creator of the universe
- 3. The elephant-headed god
- 6. The fierce goddess
- 7. The playful god with a flute
- 8. The goddess of knowledge
- 12. The god of thunder

Viksit Bharat

Andhra Pradesh

3500 MW Renewable Energy

■ Andhra Pradesh is emerging as a major hub in India's renewable-energy transition, with significant investments in transmission infrastructure to evacuate large volumes of solar and wind power from the Kurnool and Ananthapuram renewable-energy zones. In June 2026, POWERGRID fully commissioned the Ananthapuram–Kurnool interstate transmission scheme, enabling the evacuation of approximately 3,500 MW of renewable energy—2,500 MW from the Ananthapuram Solar Energy Zone and 1,000 MW from the Kurnool Solar Energy Zone. The project, costing more than ₹820 crore, includes major 400-kV transmission infrastructure and a 400/220-kV Ananthapuram pooling substation, strengthening the connection between renewable generation in Andhra Pradesh and the National Grid.

The development gained further momentum on August 1, 2026, when Prime Minister Narendra Modi inaugurated the Transmission System for the Kurnool Wind Energy Zone/Solar Energy Zone, implemented at a cost of approximately ₹3,550 crore. These projects are designed to facilitate the evacuation of renewable power generated in the Kurnool region and transmit electricity to beneficiaries across the country through the interstate grid. By strengthening high-voltage transmission corridors, the projects address one of the key challenges associated with India's renewable-energy expansion: connecting generation-rich regions with major electricity demand centres while maintaining reliable grid operation.

Looking ahead, Prime Minister Modi also laid the foundation stone for the ₹5,550-crore Transmission System for Integration of Kurnool-IV Renewable Energy Zone (REZ), Phase-I, which is designed to integrate an additional 4.5 GW of renewable generation into the national transmission network. Together, the completed and upcoming projects represent a substantial expansion of Andhra Pradesh's renewable-energy transmission backbone and support India's broader goals of integrating large-scale variable renewable generation, increasing the availability of clean electricity and reducing dependence on fossil-fuel-based generation. The developments demonstrate that India's energy transition is increasingly being supported not only by new solar and wind capacity, but also by the high-capacity transmission infrastructure required to deliver that power reliably to consumers across the country.

Vizag Airport

■ A major addition to Andhra Pradesh's transport infrastructure, the Alluri Sitarama Raju International Airport at Bhogapuram was inaugurated by Prime Minister Narendra Modi on August 1, 2026. Built as a greenfield airport through a public-private partnership with an investment exceeding ₹5,640 crore, the facility has been developed with an initial passenger-handling capacity of 6 million people per year. Its strategic location is expected to improve air connectivity for North Andhra Pradesh while supporting the movement of tourists, businesses and investment into the region.

The project goes beyond conventional airport infrastructure by incorporating a range of digital, automated and energy-efficient systems. Airport operations will make use of artificial intelligence, predictive monitoring, biometric processing and automated baggage systems, while building-management technologies are intended to improve the use of energy and other resources.

■ Andhra Pradesh is taking a major step into India's growing semiconductor industry with the upcoming ASIP Technologies semiconductor facility in Visakhapatnam. Prime Minister Narendra Modi laid the foundation stone for the project, which is being developed by ASIP Technologies Pvt. Ltd. in partnership with APACT of the Republic of Korea. With an initial investment of more than ₹460 crore, the facility is Andhra Pradesh's first semiconductor project approved under the India Semiconductor Mission, marking an important milestone in the state's push toward advanced manufacturing and technology.

Sustainability has been integrated into the facility through a 5-MW solar installation, rainwater collection, efficient HVAC and lighting systems, electric-vehicle charging facilities and waste-management measures. These features position the airport as an example of how India's expanding aviation infrastructure is increasingly combining passenger capacity with smart operations and environmental considerations.

The significance of Bhogapuram extends beyond aviation. The airport is expected to become an important economic gateway for the northern districts of Andhra Pradesh, improving access for tourism, commerce, logistics and future industrial development. Its terminal architecture incorporates elements inspired by the state's cultural and natural landscape, while the wider development is expected to create opportunities for employment and investment around the airport. With provision for future expansion beyond its initial capacity, Bhogapuram is being positioned as long-term infrastructure that can support the region's growing economic and connectivity requirements.

Chip Chapter

The facility is expected to manufacture approximately 96 million semiconductor chips annually and will initially focus on advanced packaging technologies, including flip-chip ball grid array (FCBGA) and wire-bond packaging. The project is also expected to expand into more advanced packaging technologies in the future. Beyond the plant itself, the investment is expected to create high-skilled employment and encourage the development of an ancillary semiconductor ecosystem, bringing suppliers, technology providers, engineering services and other supporting industries closer to the manufacturing base.

The background of the entire page is a composite image. The top half features a close-up of the American flag, with its stars and stripes. The bottom half features a low-angle shot of the Statue of Liberty, showing her head, crown, and raised torch against a blue sky with white clouds. The text is overlaid on these images.

UNIVERSAL ONENESS CELEBRATION

New York, USA
August, 2026

UNIVERSAL ONENESS CELEBRATION

The Universal Oneness Celebration brought together members of the Hindu American community, cultural organizations, community leaders, and representatives from different walks of American life. At the center of the gathering was Mohan Bhagwat, Sarsanghchalak of the Rashtriya Swayamsevak Sangh (RSS), whose appearance in New York had attracted considerable attention well beyond the Hindu community. The choice of New York was significant. Few cities embody diversity as visibly as New York. Languages, religions, nationalities, traditions, and identities exist side by side, sometimes harmoniously and sometimes uneasily. Against that backdrop, Bhagwat's central proposition was deceptively simple: human beings can be different without being divided.

UNIVERSAL ONENESS CELEBRATION

The idea of oneness, as presented during the celebration, was not an argument for uniformity. Bhagwat did not frame unity as a requirement that people abandon their individual cultures, beliefs, or traditions. Instead, he described diversity as something that naturally exists within a deeper unity. That distinction is important. Modern societies often struggle with the tension between individual identity and collective belonging. How much should people assimilate? How much difference can a society accommodate? Can communities maintain their distinctive traditions while still developing a shared sense of purpose? Bhagwat's answer was rooted in an Indian civilizational perspective: unity does not require sameness. For him, the many expressions of human life—different languages, customs, religious practices, foods, histories, and social traditions—can be understood as manifestations of a larger human connection.

It is an idea deeply associated with the Sanskrit expression **Vasudhaiva Kutumbakam**: the world as one family. At the New York gathering, however, this ancient phrase was presented less as a slogan and more as a framework for thinking about modern society. If the world is one family, then differences become something to understand rather than fear. The objective is not to erase distinctions but to develop the maturity to live with them. This was also why the celebration carried significance beyond a single community event. Its message was directed toward a broader question confronting contemporary societies: Can diversity become a source of strength rather than a permanent source of conflict? New York provided an unusually appropriate stage for that question.

UNIVERSAL ONENESS CELEBRATION

For Hindu Americans, the event also represented something more personal. Many in the diaspora navigate several identities at once—American in citizenship and everyday life, Indian or South Asian in cultural heritage, and Hindu in religious or civilizational identity. Bhagwat's message sought to place those identities within a larger framework rather than treating them as competing loyalties. The evening, therefore, was not simply about celebrating Hindu culture in America. It was an attempt to articulate how a particular civilizational idea could enter a multicultural society without demanding that multiculturalism disappear. The message began with diversity. It ended with belonging. And between the two was the concept of oneness.

Perhaps the most intriguing part of Bhagwat's message was his attempt to move the discussion of unity away from politics and toward something more fundamental: the human condition itself. People are visibly different. They speak different languages. They follow different religions. They eat different foods, dress differently, celebrate different festivals, and organize their communities according to different traditions. Even within the same family, individuals may have dramatically different ambitions and personalities. Yet none of these differences prevent people from experiencing many of the same fundamental emotions. A parent worries about a child. A friend feels another person's pain. A stranger helps someone in difficulty. People celebrate together, mourn together, cooperate and sacrifice for one another. For Bhagwat, these experiences point toward something deeper than social agreement. They suggest what he described as an innate oneness. This is an important distinction.

Unity based on political arrangements can be fragile. Governments can create laws, institutions can establish rules, and societies can construct systems intended to keep people together. But Bhagwat's argument goes beneath those structures. He asks us to consider whether there is already something connecting human beings before institutions attempt to connect them. That perspective changes the meaning of diversity. If humanity begins from a fundamental condition of interconnectedness, then diversity is no longer necessarily a threat to unity. In fact, it can become an expression of it. This is where the Indian idea of unity in diversity enters the conversation. The phrase is familiar to generations of Indians, but its implications are worth considering in the context of a city such as New York.

UNIVERSAL ONENESS CELEBRATION

The New York address also moved from universal ideas toward a more specific question: What does Bharat contribute to this conversation? Bhagwat's answer was rooted in what he described as India's civilizational experience. India's history is characterized by extraordinary internal diversity. Numerous languages, philosophical traditions, religious practices, communities and regional cultures have developed within the same broad civilization. From Bhagwat's perspective, India's contribution is therefore not simply its economic growth or technological progress. It is also the philosophical idea that diversity can coexist with an underlying sense of unity. This is where his discussion of Dharma becomes important. In ordinary English conversation, Dharma is often translated simply as “religion.” But the concept is considerably broader. In the context of Bhagwat's remarks, Dharma was presented as being connected with duty, ethical conduct and responsibility. That interpretation has practical consequences. If life is understood in terms of responsibility rather than simply individual entitlement, then success cannot be measured only by what a person accumulates. A successful individual, family, business, or community also has obligations toward the society around it.

This idea became particularly relevant when Bhagwat addressed the Indian diaspora in America. Indian Americans occupy a distinctive position. They participate fully in American professional, civic and social life while maintaining connections to an ancestral culture that stretches across generations. For many, identity is not a choice between two worlds but a continuous conversation between them. Bhagwat introduced the concepts of Karma Bhumi and Janma Bhumi to address this question precisely. The country in which a person lives, works and contributes is the Karma Bhumi—the field in which one's actions take place. The ancestral homeland is the Janma Bhumi. His message was that these relationships do not necessarily conflict. For the Indian diaspora, the implication is significant: cultural attachment to Bharat does not require withdrawal from American society. On the contrary, one's responsibilities toward the country in which one lives remain fundamental. That means contributing to one's local community, participating constructively in civic life, building institutions, supporting those in need and using professional success for broader social benefit. The message turns cultural identity into a responsibility rather than merely a symbol. It also offers an alternative to the idea that immigrants must choose between preserving heritage and belonging to their adopted country.

Guru-kul

BRINGING BACK
THE GURUKUL SYSTEM

The traditional Sanatani approach to education offers an idea that feels surprisingly relevant today in light of the recent CJP protests in New Delhi and student protests in Jharkhand.

The papers are cancelled, ministers have resigned, laws are being tightened and punishments are getting stricter. But hardly anyone is asking the most fundamental question:

Are we just trying to fix the examination system – or is it time we rethink the Indian education system itself?

Today, education often begins with a fee, continues through a classroom, is measured through examinations and eventually culminates in a degree. The traditional Sanatani model imagined something very different. The student did not simply go to school; the student entered a way of life.

Let us look into the Sanatani model of education that was cleverly dismantled by the British and the Islamic invaders.

Bhiksha – Seeking alms
Guru Seva – Service to the teacher
Acharya Kula – Living with the teacher
Brahmacharya – Disciplined student life
Guru Dakshina – Giving back to the teacher

Bhiksha

Students would go from household to household seeking food and bring what they collected back to their teacher. This practice encouraged humility and cultivated freedom from attachment to material possessions. It also created a connection between the Gurukul and the surrounding community.

Guru-Seva

Students were expected to contribute to the daily life of the ashram and serve their teacher. Their responsibilities could include fetching water, collecting firewood, caring for animals and maintaining the surroundings. Service was considered part of education because it taught responsibility, humility and respect for work.

Acharya-Kula

The student lived with the teacher rather than simply attending classes for a few hours each day. Learning took place through lessons, conversations, observation and participation in everyday life. The teacher could therefore guide not only the student's knowledge but also his habits, conduct and character.

Brahmacharya

Student life was built around discipline, self-control and dedication to learning. Students were expected to regulate their habits, desires and daily routines rather than live primarily for comfort and pleasure.

Prashna

Questioning was an important part of the traditional teacher–student relationship. Students were encouraged to ask difficult questions, seek explanations and engage in thoughtful discussions with their teachers. The Upanishads are filled with such dialogues, showing that education was not merely about memorizing answers but about developing the courage and curiosity to ask “Why?”.

Guru Dakshina

After the completion of studies, the student was expected to offer a gift or service to the teacher as an expression of gratitude and respect. This offering was not necessarily a fixed monetary payment; its form could vary depending on the teacher, student, and circumstances.

Modern education often places a high financial cost on families through tuition, books, housing and other expenses. The cost of education can make access to quality education heavily dependent on a family's financial ability.

Further, modern education offers clearly defined streams such as Science, Arts and Commerce, allowing students to specialize in subjects aligned with their academic and professional goals. However, in this highly specialized structure, traditional Indian intellectual traditions—including Vedic literature, the Upanishads, Indian philosophy and classical Sanatani thought—are often absent from mainstream curricula.

For centuries, Indian education included traditions of learning in Sanskrit and other classical languages, including grammar, logic, philosophy, mathematics, medicine, literature and religious texts. The Vedas, Upanishads and wider traditions of Indian philosophy formed an important part of this intellectual heritage. Under British rule, however, the purpose and structure of publicly supported education gradually changed.

A major turning point came with Thomas Babington Macaulay's 1835 Minute on Indian Education. Macaulay argued that government funds should be directed toward English-language education and European literature and science, rather than continuing to prioritize classical Sanskrit

The problem was not that India learned Western science. The problem was that Western knowledge increasingly came to be taught as modern knowledge, while India's own intellectual traditions were pushed toward the margins.

Today, a student can study physics, chemistry, economics, commerce, engineering and medicine for years and graduate without ever seriously encountering the intellectual traditions represented by the Vedas, Upanishads, Indian philosophy or classical Sanatani thought.

If India truly wants to build a new generation rooted in its civilization, it should look seriously at the ancient Gurukul method of education. The focus should return to the teacher–student relationship, disciplined living, service, questioning and learning as a way of life, while giving a central place to Sanatana Dharma's own intellectual heritage—the Vedas, Upanishads, Bhagavad Gita, Itihasas, Puranas, Indian philosophy, Sanskrit and classical literature. Modern subjects such as science, mathematics, medicine, engineering and commerce should continue, but they should be taught alongside India's philosophical and cultural traditions rather than replacing them.

A truly confident India should not educate its children to know everything about the world while knowing almost nothing about the civilization from which they come.

Bring back the Gurukul system of education.
